Jana Ayyad

Dear Hiring Manager,

I am writing to express my eager interest in an internship opportunity where I can apply the knowledge developed through my current Bachelor of Computer Science studies at Beirut Arab University and my practical experience. I am seeking to contribute to real-world projects, strengthen my technical abilities in Java, JavaScript, PHP, HTML, CSS, and SQL, and continue developing as a dedicated Computer Science student.

Through my coursework and numerous projects, I have gained practical experience in areas including web development, database design, software engineering, and data structures. My academic work allowed me to strengthen my analysis skills and develop organized, systematically approached solutions.

Specifically, my project experience includes:

- **InsurePro:** A Software Engineering project where I worked on requirements analysis, system design, and core functionality;
- **Luxora:** An online store website developed using HTML, CSS, and JavaScript;
- **UniTrack:** A university management system developed using Java and data structures;
- **Global Shipping:** A database project involving entities, relationships, and SQL queries.

These projects have not only sharpened my technical acumen but also refined my problem-solving and critical thinking skills. Beyond my academics, volunteering at Google DevFest 2025 and the Lebanese Collegiate Programming Contest (LCPC) has provided valuable experience in collaborative and professional technical environments. I am a continuous, highly motivated learner eager to take initiative and grow professionally.

I would welcome the opportunity to discuss how my skills and background could benefit your team. I look forward to hearing from you.

Sincerely,

Jana Ayyad
